ADVANCED
CLINICAL EDUCATION

MINIMALLY INVASIVE SOFT TISSUE GRAFTING COURSE

Explore current methods to manage soft tissue defects around teeth, including:

- ◇ **DERMAL ARC TECHNIQUE**
Soft tissue allografts & minimal incisions
- ◇ **CONNECTIVE TISSUE GRAFTS**
For cases where allografts are not indicated

REGISTRATION

AGENDA

SATURDAY, APRIL 20TH

VANCOUVER ISLAND DENTAL SPECIALISTS

#102-6545 Portsmouth Road Nanaimo, BC V9V 1A3
PH: 250.824.1724

8:00AM - Arrival for registration, coffee/tea.

8:30AM-10:30AM - Lecture with Dr. Leziy, Dr. Nault and Dr. Hart. Discussion and questions are encouraged.

******* Assistants for each dentist are requested to arrive by 10:00AM so that they may be oriented and can learn from our certified dental assistants Vicki and Candace (1 per practitioner)

10:45AM-12:30PM - Live demonstration cases- observe grafts with acellular dermal matrices using our conservative dermal ARC protocol and connective tissue graft procedures using minimally invasive concepts.

12:30PM-1:00PM - Lunch (will be provided for all participants and their assistants).

1:15PM-4:15PM - Hands-on component.

* Participants will have the opportunity to treat 1 of their own patients.

** For participants who do not wish to treat their own patient, the option of observing other clinicians is encouraged. Alternatively, pig jaws will be provided for 'hands-on' practice.

*** Patients scheduled for treatment by participants should plan to arrive no later than 12:50PM.

4:15PM-5:00PM - Wrap-up, discussion and prepare for departure.

ADVANCED DERMAL & CT GRAFT PROCEDURES FOR ROOT COVERAGE

ADVANCED
CLINICAL EDUCATION

SYNOPSIS

Recession defects are common among patients that are cared for by dentists and periodontists. There are several indications for treatment, and there are numerous methods used to address tissue quality and stability issues.

This one-day course is designed for the clinician who wants to learn more about dermal graft procedures and dermal grafts for root coverage. Course participants will develop basic skills to treat simple to moderately complex cases.

This course will include a lecture review of the procedures/techniques, indications, limitations, side-effects or potential complications and use of appropriate surgical instruments.

The unique benefits of using Straumann's acellular dermal matrix graft will be discussed and illustrated VS where and why autogenous tissue should be considered.

The use of 4 tunnelling instruments developed by Dr. Leziy and marketed by ProNorth Medical will be illustrated. These instruments are available for purchase at the course.

THIS COURSE IS CO-SUPPORTED BY

SURGICAL TUNNELING KITS

will be available for purchase

\$375 +GST

Surgical kits / instrumentation have been designed for this procedure.

COURSE OBJECTIVES

PART 1

LECTURE WITH DR. LEZIY/DR. NAULT/DR. HART
2 Hour didactic/lecture on current grafting concepts. Understand the gold standard autogenous graft indications and where allografts can be used. This lecture will cover terminology, the varying contemporary surgical protocols that are used for tissue augmentation, indications, and treatment outcomes/expectations. A brief video review of a typical case will be presented.

PART 2

Observation of several live surgeries demonstrating the Dermal ARC grafting protocol and current CT graft procedures for root coverage. Dr. Leziy, Dr. Nault will each treat a patient and Dr. Hart will assist with the narration/discussion of the steps of the procedures. Participants will have the opportunity to move between each of the surgeries to see varying approaches unique to the clinical situation of the patient.

PART 3

All participants will have the opportunity to perform surgery on one of their own patients under the supervision of Dr. Leziy, Dr. Nault and Dr. Hart.

- Clinicians who are not licensed in BC may observe other participants. Cases should be pre-selected by the participant.

- We strongly encourage you to forward in electronic format, photographs of the cases that you intend to treat, to make this the best learning experience possible. Ideally, large regions requiring treatment should be considered [4+ teeth] for dermal graft cases, while 1-3 teeth for connective tissue graft cases, in otherwise periodontally healthy patients. It is ideal to select patients who are not extremely anxious and that do not require sedation for treatment.

EXPECTATIONS

DERMAL GRAFT & CT GRAFT TECHNIQUES - IN-DEPTH PROCEDURE REVIEW

- Review of surgical instrumentation, flap designs, suturing techniques.
- Recipient site preparation options.
- Donor site harvesting methods and post-surgical management will be discussed and illustrated.
- The rationale for using acellular dermal grafts will be discussed, in the context of why autogenous grafts are still considered the treatment gold standard.
- Understand the healing phase and treatment outcomes.
- Post-surgical management of your patient.
- Identifying treatment risks and managing surgical and post-surgical complications.

WHAT IS INCLUDED

- 1-day education program, coffee/lunch.
- Dermal matrix graft material - provided by Straumann.
- Sutures - provided by ProNorth Medical (Rob Horne)
- Use of our tunneling instruments

WHAT IS NOT INCLUDED

- A patient for the hands-on supervised treatment.
- You are responsible for bringing/arranging for a CDA
- Your own protective eyewear/magnification, uniform/gowns/patient drapes
- Your favourite gloves, masks, protective eyewear for your CDA and patient, your preferred local anaesthetic, post-surgical medications/rinses.
- 15C scalpel blades, analgesics to be administered prior to surgery, preop oral rinse.
- Surgical setup, your favourite surgical instruments (basic recommendations will be provided on registration)
- Prescription pad or prepared scripts
